The PACE Method: Turning Ideas into Reality

A four-step framework to test, build, and launch new ideas without burning efforts.

P Plan **A** Analyze **C** Construct **E** Execute

ORIGINS • DATA SCIENCE LIFECYCLE

The PACE Model for Data Science

P

1. Plan

Define Scope

Define project scope and data needs.

A

2. Analyze

Explore & Correlate

Exploratory data analysis and correlations.

C

3. Construct

Engineer & Train

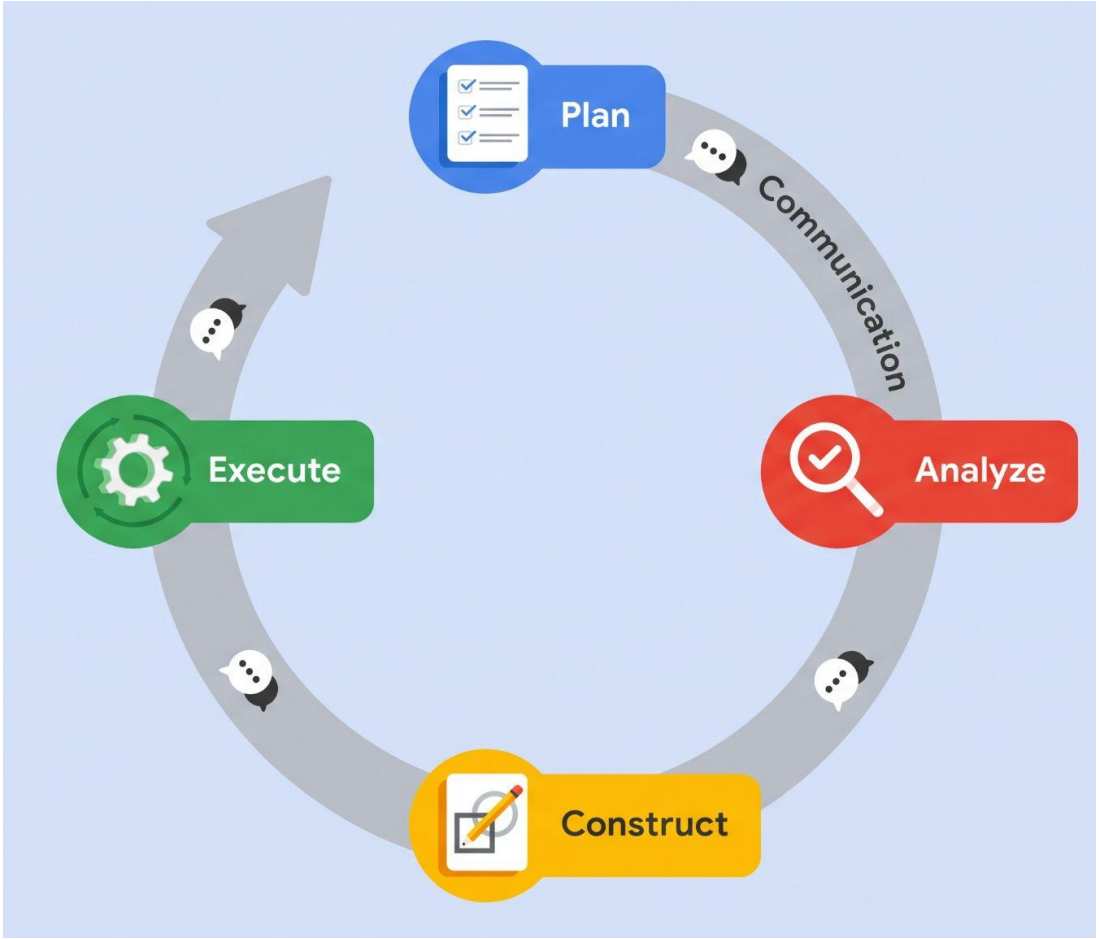

Engineer features and train models.

E

4. Execute

Deploy & Monitor

Deploy pipeline and monitor model drift.

PACE is an open feedback loop. Communication is Driver

FRAMEWORK OVERVIEW

Four Simple Steps to Build Businesses

P

1. Plan

Find the pain point

Define the real problem and set strict time limits.

A

2. Analyze

Listen before building

Talk to real people and check if they will pay.

C

3. Construct

Build the tiny test

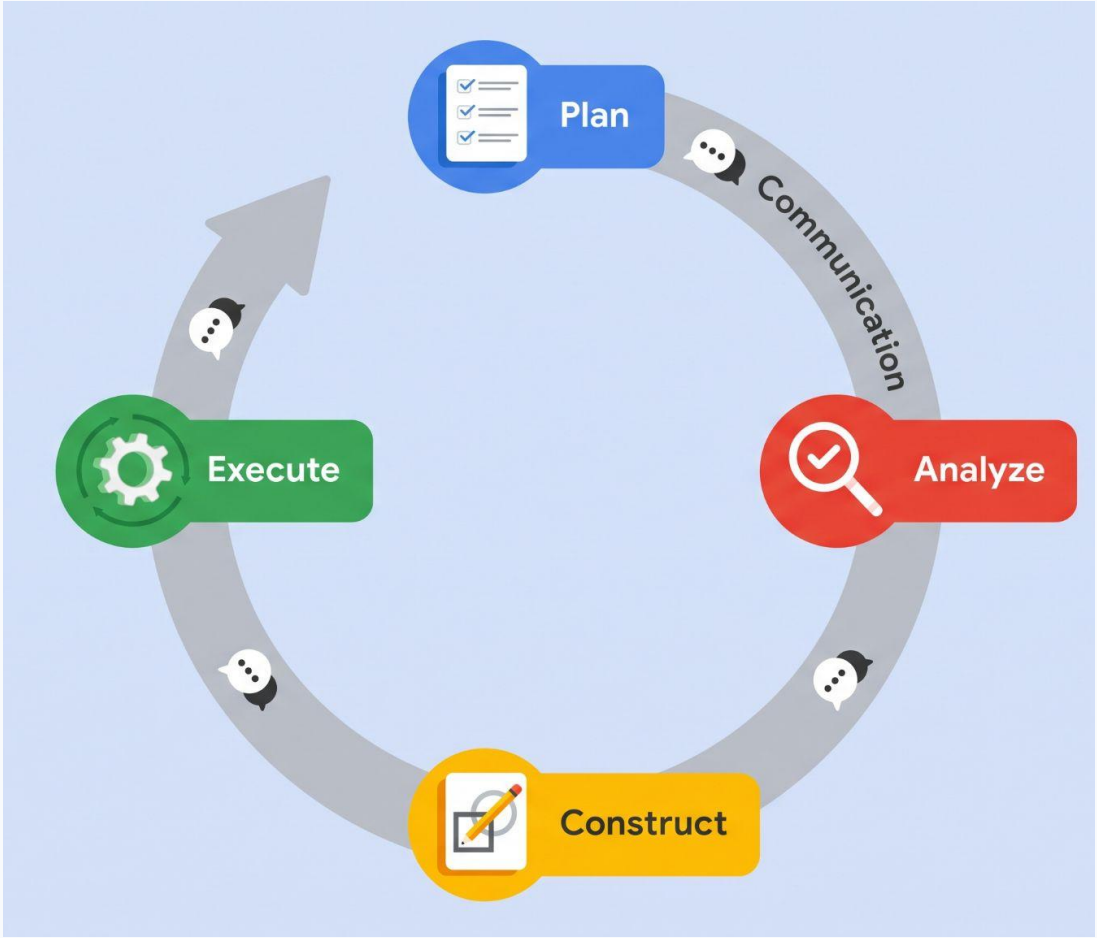

Make the simplest sample that delivers real value.

E

4. Execute

Launch and adapt

Put it in front of users and know when to pivot.

PACE is an open feedback loop. Communication is Driver

STEP 01 • PLAN

Start with a Sharp Question, Not a Guess

1. Pinpoint the Everyday Friction

What specific daily frustration makes life difficult for your user?

2. Offer Obvious Advantage

Why would someone pick your fix over what they use today?

3. Set Budget Guardrails

Define the exact amount of cash and time you are willing to risk.

STEP 02 • ANALYZE

Listen to Customers Before Touching Code

Have Real Conversations

Interview 20 real prospects about how they handle the problem right now.

Test Willingness to Pay

Ask for a pre-order or letter of intent before writing software.

Check Switching Effort

How tough is it for customers to abandon their current habit? Your solution must be 10× easier to adopt.

STEP 03 • CONSTRUCT

Build the Tent Before the Castle

The Common Mistake

Building every feature imaginable before showing it to a single customer.

Result: 6 months lost building things users ignore.

The PACE Way

Build the smallest working prototype that solves one single core problem.

Rule: Make sure you earn more per customer than it costs to serve them.

STEP 04 • EXECUTE

Launch, Watch Real Behavior, and Adapt

STAGE 1

Pilot with 10 Fans

Launch to a tiny, eager group. Treat them like VIPs and observe how they use it.

STAGE 2

Watch Actions, Not Words

Do people return the next day? Retention is the only truth that matters.

STAGE 3

Set Pivot Triggers

Agree in advance: if retention is below 30%, change direction immediately.

CASE STUDY IN ACTION

How Uber used PACE into $12 Billion

Plan

Set a goal to lunch a delivery app within certain budget and time

Analyze

Analysed dense urban hunger cues.

Construct

UberFRESH MVP

Execute

Launched the stand-alone Uber Eats app.Scaled with restaurant partners.

The 4 Questions to Ask Before You Build

01 • PLAN

What hurts?

Whose problem are you solving?

02 • ANALYZE

Who pays?

Did real customers prove demand?

03 • CONSTRUCT

What is the test?

What can you build in 7 days?

04 • EXECUTE

When to pivot?

What metric tells you to stop?

Keep communication open at every step • Learn fast • Iterate often
